ATOM LYNX 6 27.5 PRO Electric Bike

ATOM - BROSE MID DRIVE

Balanced progressive geometry. Value packed trail ready. Patented Split Pivot Suspension. Finding time to shred a new undiscovered trail system or set a new your new personal best on your favorite local trail will become a priority on the fully capable ATOM Lynx 6 27.5 Pro.

MULTI-FUNCTION COLOR DISPLAY

Multi-function color display and remote control included, with information about range, distance, speed, time, motor mode parameters, etc.

INTEGRATED BATTERY by BH

Useful life: Maximum deterioration of 20% after 500 complete charge and discharge cycles (>30.000 km).

CHARGING TIME

The battery can be charged directly from a port integrated into the frame or from the battery itself, allowing a rapid charge with 80% capacity in 2 hours.

BROSE MID DRIVE MOTOR

Using a belt rather than gears and weighing just over 7lbs., the Brose mid-drive motor provides a virtually silent operation and offers of up to 90nm of torque.

The compact motor is integrated into the frame with minimal visual impact and a low center of gravity. The motor offers no resistance in «no assistance» mode.

3 SENSORS: TORQUE, SPEED AND RHYTHM

The torque and rhythm sensors fully integrated into the motor unit offer maximum precision and allow the system to provide jerk-free, powerful, reactive assistance.

SPLIT PIVOT TECHNOLOGY LYNX RANGE

ATOM full suspension bikes incorporate BH's patented Split Pivot technology. Split Pivot technology provides a suspension system with floating shock absorption, developed exclusively for BH Bikes.

The Lynx Split Pivot suspension design allows three forces to act separately by isolating pedaling, braking and suspension forces. This provides the rider with the most neutral and natural pedaling platform on the market.

- Specifications

ATOM LYNX 6 27.5 PRO Specifications
