ST1 X: The superlative way to commute

The ST1 line is the entry-level category among our premium electric bikes and leaves nothing to be desired in terms of both form and function.

Powered by the new sporty Cyro Drive Motor, the ST1 X offers the most fun you can have riding in an urban environment. Together with the 618 watt hours delivered by the battery, you can achieve a range of up to 75 miles. A clear, economical design has always been one

of the core values at Stromer. This is continued in the 1x11-speed shifting system. By dispensing with a front derailleur and the associated shift lever, the ST1 X presents a clean look along with excellent shift performance. When combined with the Cyro Drive Motor, the 1x11-speed shifting system enables even more dynamic riding.

ST1 X: fit and finish

The ST1 X is the newest member of the Stromer family. Its elegant finish hints at its design and technological innovations. In addition to the clean white and charcoal finishes, you can also choose a fresh shade of orange for your ST1 X. Apart from that, two models with different frame sizes are available. The Comfort model with its 17-inch frame offers great ease of mounting and dismounting, even when you're wearing elegant clothing. The Sport version comes with a 17-, 20- or 22-inch frame, depending on your height.

ST1 X: range and power

The ST1 X doesn't need to be charged as often as the ST1. The 619 Wh battery, which is hidden in the down tube, can cover a distance of up to 120 km. If you decide to take the stronger 814 Wh battery, you can ride up to 150 km. Powered by a 500 W Cyro Drive motor with 35 Nm torque, it takes hardly any effort at all to drive off on your e-bike. Enjoy the exhilarating feeling of urban mobility at up to 45 km/h.

Available in three colors, four sizes, and two battery configurations, see specs.
