- Features

## Stromer Elite ST2 Features

### **More Design:**

Taking every detail into consideration when it comes to safety, serviceability, comfort, handling, performance, and style - the ST2 has the highest level of integration of any e-bike.

### **More Power:**

The ST2's new, and more compact SYNO Drive motor not only provides 500W of power, but an enormous 35Nm of torque too: that's more than enough to put a very big smile on your face when you step on its pedals.

### **More Range:**

With a range of up to 150km, a new, proprietary, Li-Ion battery puts the ST2 in a league of its own. The 48-Volt battery contains a whopping 814Wh of energy. Despite this significant increase in endurance, the ST2's battery still tucks neatly away into the down tube.

### **More Connectivity:**

Stromer is making and writing history when it comes to digital connectivity. Its new user interface provides remote, wireless interaction between the bike and other touch points such as the Stromer Portal and your smartphone.

## **Omni:**

your connection between the Stromer digital world and the real world around you. It enables you to communicate with your bike through your phone, remotely tune its settings, and even activate anti-theft!
